Camera and SDK Overview

The ZED X stereo camera combines powerful hardware and intelligent software to create an unrivalled solution for obstacle detection, navigation and process automation.

Built to function efficiently in harsh environments, the IP67-rated ZED X and ZED X Mini stereo cameras' robust aluminium body can withstand outdoor conditions, making it ideal for robots deployed in various sectors including agriculture, manufacturing, logistics.

Rev1.2

* ZED X General Specifications

wide-Angle3DAI camera
 Combine long-range depth perception with AI to perceive your environment in 3D with up to a 120° wide-angle field of view.

IP67-rated Enclosure
 Resistant to dust, water and humidity, the new ZED X is designed for outdoor applications and challenging medical, industrial, agricultural environments, and more.

Multi-camera synchronization
 Hardware synchronisation for multiple connected cameras at frame-level within 100 microseconds. Capture RGB and depth images of the same scene with multiple cameras all triggered at the same time.

High Quality Lenses
 Wide-angle 9-element all-glass dual lens with optically corrected distortion, and optional polarizing filter.

High-performance IMU
 The all-new IMU combines a 16-bit triaxial accelerometer and gyroscope with vibration resistance, ultra low noise and bias for exceptional motion tracking

secure GM SL2 connection
 GMSL2 connectivity is ideal for robotics. Transmit video without EMI and high data rate through a lockable interface to a Jetson Orin over a distance of up to 15m with low latency.

* ZED X Lens Options

Focal Lengths Available

2.2mm

2.2mm fixed focal lens offers an exceptionally wide field of view while also providing optically corrected distortion for enhanced image quality.

4mm

The 4mm focal length lens is perfect for an enhanced resolution and depth accuracy at longer ranges.

NO More Reflections with polarizing Filters

Experience the highest image quality possible outdoors with the built-in polarizing filter. This filter effectively minimizes glare and reflections while enhancing color depth and overall quality.

*ZEDX SDK

SDK Modules

stereo capture	The ZED X features dual lenses for capturing high-definition 3D video with an expansive field of view. It delivers two synchronized left and right video streams, processed by the Jetson's ISP, and provides images in RGB format on the host.	spatial Mapping	The ZED continually scans its environment, generating a 3D map in real-time. This map is updated as the device moves and captures new scene elements. Thanks to its ability to perceive distances beyond the capabilities of conventional RGB-D sensors, the camera can rapidly reconstruct 3D maps for both expansive indoor and outdoor spaces.
Depth sensing		object Detection	Object detection involves identifying objects within an image. Leveraging depth sensing and 3D data, the ZED camera offers both 2D and 3D positional information for objects within the scene. Starting with ZED SDK 3.6, users can employ custom detectors via the API, with 2D detections being processed alongside 3D information, including object position and 3D bounding boxes. More informations in the documentation.
Depth Map	Depth maps captured by the ZED X store a distance value (Z) for each pixel (X, Y) in the image. The distance is expressed in metric units (meters for example) and calculated from the back of the left eye of the camera to the scene object.	Body Tracking	Body tracking module focuses on skeleton bone detection and tracking. A detected bone is represented by its two end points also called keypoints. The ZED camera provides 2D and 3D information for each keypoint as well as local rotation. The ZED SDK supports four body formats: 18 or 34, 38 keypoints.
3D point cloud	A point cloud can be seen as a depth map in three dimensions. While a depth map only contains the distance or Z information for each pixel, a point cloud is a collection of 3D points (X,Y,Z) that represent the external surface of the scene and can contain color information.		
positional Tracking	The ZED X uses visual tracking of its surroundings to understand the movement of the user or system holding it. As the camera moves in the real-world, it reports its new position and orientation. This information is called the camera 6DoF pose. Pose information is output at the frame rate of the camera, up to 100 times per second in WVGA mode.

capture cards

To capture the ZED X on the NVIDIA Jetson AGX platform, one solution is to utilize a GMSL2 capture card that directly connects to the Jetson's CSI port.

ZED Link Duo capture card

compatibility	NVIDIA Jet son xavier/orin platform(NX/Nano)
Max. number of cameras	Capture 1x GMSL2 camera input in SD/HD/4K up to 4K@15.
De serialize r	MAX9296A
power	Requires external 12-19v power supply.

ZED Link Duo capture card

compatibility	NVIDIA Jet son xavier/orin platform(AC X/NX/Nano)
Max. Number of cameras	Capture 2x GMSL2 camera inputs in SD/HD/4K up to 4K@15.
De serialize r	MAX96712
power	Connects to and is powered by the Samtec port of the Orin/Xavier AGX Developer Kit. Requires external power supply for NX/Nano (12V-19V) when using MIPI port

ZED Link Quad capture card

compatibility	NVIDIA Jet son xavier/orin platform
Max. number of cameras	Capture 4x GMSL2 camera inputs in SD/HD/4K up to 4K@30.
De serialize r	2 X MAX96712
power	Requires a 12-19v external power supply.
